

Silt Trapping Course

Undertaking works that cause silt to enter water courses can result in prosecution and substantial fines

Forestry and Construction activities can often result in significant ground disturbance resulting in a real risk of silt entering any nearby water courses.

This course will help you understand the importance of trapping silt and provide practical examples of effective silt containment in a variety of situations.

Date of the Course
4th February 2015
3rd September 2015
